

PET 3KM ENERGIZER (INCL. MAINS POWER ADAPTOR)

The pet energizer is a low power DIY electric fencing energizer, which can be used to keep your pets where you want them. The pet energizer delivers an electric shock, which is not pleasant but is a safe shock and is usually well remembered by the pet. The pet gets to know which areas are off-limits by identifying that the poly wire is the barrier and therefore it knows not to enter. Once the pet is familiar with the fence wire, the fence can then in many instances be turned off.

Features:

- Powers up to 3km (optimal conditions) and 1km (average conditions) of fence wire
- Robust weather resistant system
- Adaptable mounting options (wall, fence wire, wooden post or tread-in post)
- Powered by battery (sold separately) or mains power adaptor (included)
- Lightning protection
- A solar panel PetStop kit is also available

Specifications:

Dimensions	190(L) x 115(W) x 76(D)mm
Output energy max	0.3J (stored energy 0.5J)
Output voltage	3.0kV @5000hms 4.0kV @10000hms 7.5kV @ Open circuit
Power source	3Watt Nemtek solar panel and battery Battery 12Vdc Power supply 12Vdc
IP rating	IP54
